<Question>: Isabelle bought party supplies for her little sister 2019s birthday party. She spent \$12 on ingredients for the cake, \$43 on birthday presents, \$15 on decorations, \$4 on invitations, and \$22 on goodie bags for the party guests. She split the cost evenly three ways with her two parents. How many dollars did each person pay?

(1) Directly Predict

<Prompt>: Please answer this question: **<Question>**

<Answer>:

Each person paid \$24.

(2) Chain-of-Thought

<Prompt>: Please answer this question: **<Question>**

<Reasoning>: Let's think step by step in order to {produce the answer}. We ...

<Answer>: Each person paid \$32. We

We firstly need to find the total cost of the party supplies. We add up all the expenses:

\$12 (ingredients for the cake) + \$43 (birthday presents) + \$15 (decorations) + \$4 (invitations) + \$22 (goodie bags) = \$96.

Next, we divide the total cost by 3 to find out how much each person paid: \$96 ÷ 3 = \$32. Therefore, each person paid \$32.

<Gold Answer>: Isabelle spent $12 + 43 + 15 + 4 + 22 =$
\$ $\langle 12+43+15+4+22=96 \rangle 96$ on party supplies. \n The cost was evenly split 3 ways, so each person paid $96 / 3 =$ \$ $\langle 96/3=32 \rangle 32$.

(3) In-Context Learning

<Prompt>: Please answer this question: **<Question>**

<Format>: Answer questions with short factoid answers.

Follow **the following format** and reply in the way of scripts, Please answer the **<Question>**.

<Answer>:

In-Context

Question: In a dance class of 20 students, 20% enrolled in contemporary dance, 25% of the remaining enrolled in jazz dance,
Answer: There are $20 \times 20/100 = \langle 20*20/100=4 \rangle 4$ students who enrolled in contemporary dance. So,

Question: Ryan plants 2 flowers a day in his garden. After 15 days, how many flowers does he have if 5 did not grow?
Answer: Ryan plants $2*15=\langle 2*15=30 \rangle 30$ flowers in total. Given 5 plants did not grow, he has $30-5=\langle 30-5=25 \rangle 25$ flowers.

<Answer>: **The total cost is \$12 + \$43 + \$15 + \$4 + \$22 =**
\$ $\langle 12+43+15+4+22=96 \rangle 96$. Each person paid \$96 / 3 =
\$ $\langle 96/3=32 \rangle 32$.
